EDUCATION

Northeastern University

Master of Science in Information Systems, College of Engineering

CMR Institute of Technology

Bachelor of Engineering in Computer Science

Expected Dec 2026

Boston, MA

Jun 2023

Bengaluru, India

TECHNICAL SKILLS

Languages: Swift, Python, Java, HTML/CSS, SQL

Frameworks & Libraries: SwiftUI, UIKit, Combine, Core Data, REST APIs, AVFoundation, Core Haptics, Firebase, Angular

Tools & Platforms: Xcode, TestFlight, Git, GitHub Actions, AWS (EC2, S3, RDS), Jira, PowerBI, Claude, Anthropic API,

Prompt Engineering, NotebookLM, Figma Make

Design & Accessibility: Figma, VoiceOver, WCAG 2.2, Apple Human Interface Guidelines

PROFESSIONAL EXPERIENCE

Research Assistant – iOS Developer

Sep 2025 – Present

The Roux Institute, Northeastern University

Boston, MA

- Built StemAlly, an accessibility-first STEM learning app for blind and low-vision learners, owning the full lifecycle from Figma prototyping through AI-accelerated SwiftUI implementation to TestFlight delivery, enabling nonvisual exploration of math and science content through multimodal haptic, audio, and VoiceOver feedback
- Developed TactileNav, an indoor navigation prototype for non-visual wayfinding, mapping real-world spaces with type-specific audio tones and haptic patterns and resolving VoiceOver gesture conflicts so blind users could independently explore building layouts
- Ran usability studies and analyzed task and gesture logs to drive iterative design improvements, shipping updated builds on a regular feedback cycle with structured triage of issues and feature requests
- Demonstrated working prototypes at accessibility conferences directly with blind and low-vision users, translating field feedback into gesture interaction, feedback calibration, and navigation flow improvements

Technical Project Manager

Dec 2025 – May 2026

Clean Harbors

Norwell, MA

- Translated Figma wireframes into technical requirements for a permit-management web application, partnering with engineering to deliver permit creation, status tracking, and role-based approval workflows across 200+ branches
- Built interactive Power BI dashboards and Excel reports to visualize KPI metrics and surface delivery risk across platform teams, turning sprint data into weekly performance reports for senior leadership

Teaching Assistant – iOS Development

Sep 2025 – Dec 2025

Northeastern University

Boston, MA

- Led weekly lab sessions and office hours for 40+ graduate students, designing iOS assignments progressing from programmatic UIKit to SwiftUI and providing code reviews on architecture patterns, Core Data usage, and Combine framework

Software Engineer

Jun 2023 – Aug 2024

Capgemini

Bengaluru, India

- Contributed to RESTful API development across multiple client engagements, collaborating with engineering teams to support enterprise application builds on AWS (EC2, S3, RDS)
- Performed functional testing and UAT for client applications, writing test cases and logging defects to ensure quality before production releases across delivery cycles

PROJECTS

TactileNav – Accessible Indoor Navigation App

May 2026 – Present

- Shipped an iOS app for blind and low-vision users to explore indoor maps using OpenStreetMap data, converting raw geographic data into accessible touch-based map views with distinct audio and haptic cues for streets, intersections, and landmarks
- Partnered with the Portland, ME traffic department to source real Accessible Pedestrian Signal (APS) data, an ongoing integration to ground the navigation model in real-world signal infrastructure rather than mapped assumptions

Ally – Accessibility Learning App

Jun 2026

- Built an iOS app teaching 27 accessibility topics and 22 WCAG success criteria through a fully on-device architecture requiring no backend
- Built a plain-language Readability feature that rewrites on-screen text in real time to improve comprehension for users with cognitive and reading disabilities
- Used Figma Make to prototype an alternative visual UI direction, validating that the redesign preserved full VoiceOver and accessibility support before implementation

Swaptitude – iOS Skill Exchange Platform

Apr 2025

- Built a native iOS marketplace end-to-end in SwiftUI/MVVM, integrating Firebase Auth, a Cloud Functions-based skill-matching algorithm, and real-time Firestore messaging with offline persistence and push notifications
- Designed a user profile system with skill portfolios, ratings, and reviews, building reusable SwiftUI components for profile editing, skill search, and match discovery
